THE DTL  Searching for Psychology Articles in thedtl.org

1. Subject Guides

2. Psychology

3. PsycINFO is a database of abstracts, citations and summaries from book chapters, books, dissertations, and articles dating from the 16th century to the present. It includes some full-texts. Use the same search tactics in both PsycINFO and PsycARTICLES listed below. Sign in with the 14-digit barcode on the back of your student ID.

4. PsycARTICLES is a database of articles from journals published by the American Psychological Association.

5. In PsycARTICLES choose a subject heading – main subject gives more results than major subject; identifier / keyword gives more results than main subject.

6. If you are unsure of a subject heading, you can consult the thesaurus at the top of the screen in either PsycINFO or PsycARTICLES.
7. In PsycARTICLES, type a search term, click search. You can limit by full text, peer reviewed, and publication dates, or you can place those limits later in case you find important articles that you need to request through Interlibrary Loan. You may add another keyword or subject.

8. Note the links for abstracts, full text, citations and references.

9. Limit on the left side by subject, classification, age group, population, and/or methodology (if that is important).
10. Suggestions for other searches are at the bottom of the page.

11. When you find an article you like, open the abstract and look just below the abstract for subject and MeSH subject. These may provide additional research terms. Look at the right side for cited by and related items.
